*Tips for Mac Users in Project in Textbook

Excel Module 3

SAM states that this project is not compatible with Mac, but you will be successful with this project by using some alternatives. (App Stream 2.0 is very sluggish.)

1. When it says "...go to File---> Options", just click Excel tab then click Preferences

2. When selecting multiple cells, press and hold command while clicking the cells to select.

3. When it says "Press F4", just press it with fn key.

4. When it comes to Logical formulation, pressing TAB doesn't work, so just click on the next text selection

5. You can't find Quick analysis on the very first step of the Project (3-1), just do the manual way: make the formula and Fill Handle to the rest of the cells within the range.
